

I-87211W

Quick Start Guide

Date: May.2010

● Introduction:

This manual introduces the basic instructions for installing and using the I-87211W in a quick and easy way. For more detailed information, please refer to the I-87211W user manual located on the ICP DAS CD-ROM, or download it from the ICP DAS web site: http://www.icpdas.com/products/Remote_IO/i-87k/i-87211w.htm

● Package Checklist

One I-87211W Module

Software Utility CD

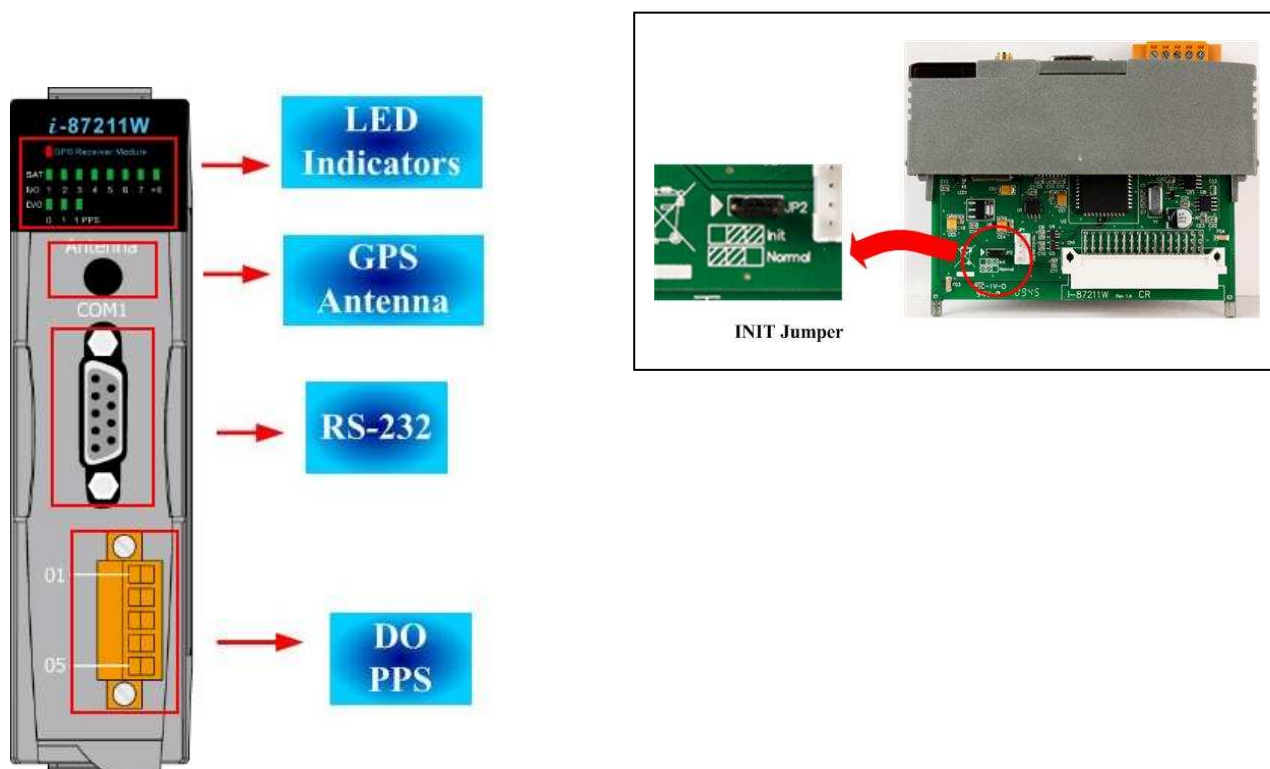

Quick Start Guide

RS-232 Cable

Item	Quantity
I-87211W	1
External GPS antenna (ANT-115-03, Length: 5m)	1
RS-232 Cable (CA-0915)	1
Product CD	1
Quick Start Guide	1

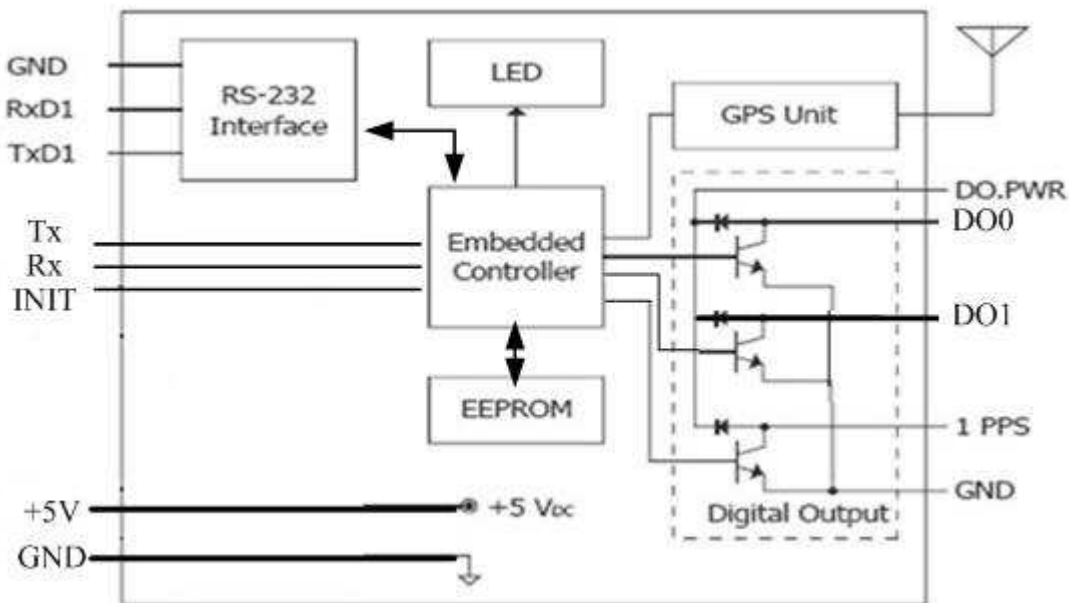

● Appearance

● LED Indicators

LED	status	Description
GPS (red)	ON	Module is operating / functioning correctly.
	OFF	There is an error with the module. The module has encountered an error.
SAT (green)	ON	Indicates how many GPS satellites are in View.
	OFF	
DO0 (green)	ON	Digital Output 0 is active.
	OFF	Digital Output 0 is off.
DO1 (green)	ON	Digital Output 1 is active.
	OFF	Digital Output 1 is off.
1 PPS (green)	ON	The PPS is on.
	OFF	The PPS is off.

Block Diagram & Pin Assignments

Pin Assignment	Terminal No.	Pin Assignment
-	01	-
GPS_TxD	02	-
GPS_RxD	03	-
-	04	-
GND	05	-

COM1 9-Pin Female D-Sub Connector

Terminal No.	Pin Assignment
01	DO.PWR
02	DO_0
03	DO_1
04	1 PPS
05	GND

Wiring

DO wiring

Output Type	ON State LED ON Readback as 1	OFF State LED OFF Readback as 0
	Relay ON	Relay Off
Drive Relay		
Resistance Load		

PPS wiring

Output Type	ON State	OFF State
	Relay ON	Relay Off
Drive Relay		
Resistance Load		

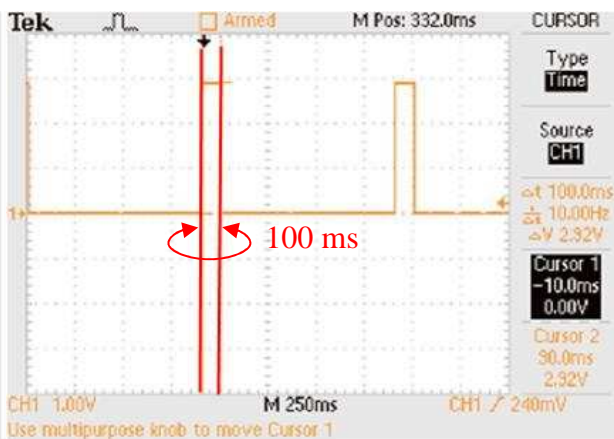

● PPS output

The PPS will output a single 100 ms pulse per second when receiving effective GPS signals. See the figure B below for details.

Figure A.

Figure B.

The figure A is represented by outputting a signal in 1 second cycle.

● **Installation**

Use the figures below as a guide to installing your I-87211W in a PAC.

● **Operation modes**

The I-87211W has two operation modes (INIT and normal modes) that can be determined using the switch mechanism on the I/O expansion unit.

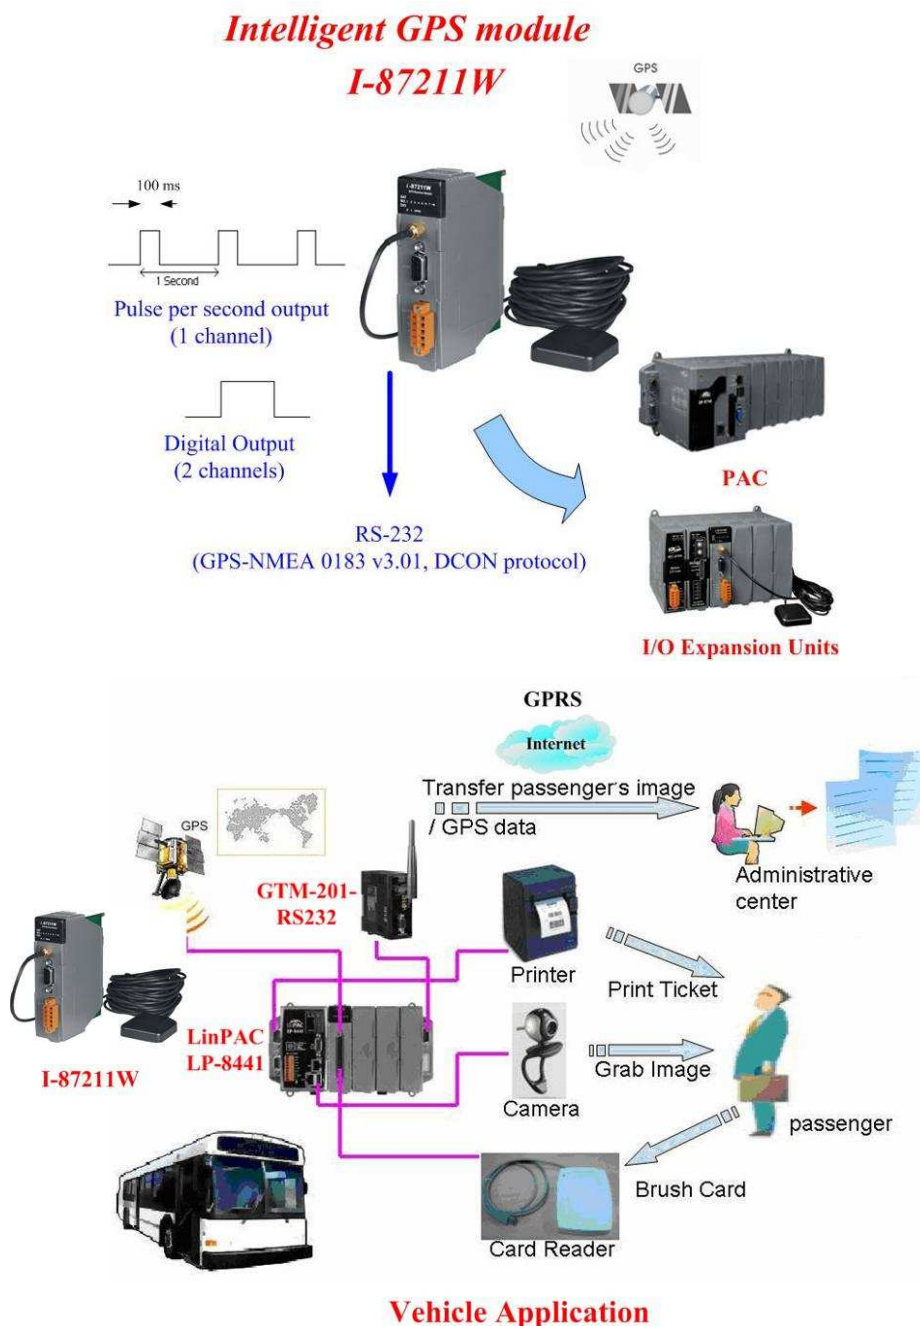

Note:

1. Users should refer to the manual for the various remote I/O expansion units to understand how to operate the I-87211W in INIT or normal modes.
2. When plugging the I-87211W module into a PAC, the module is always in INIT mode. A description of each mode and a diagram are below.

Mode	Description
INIT	After setting the module to "INIT" mode and restarting, users can establish a connection using the default address and communication settings. New parameters for the module can then be set. INIT mode: <ul style="list-style-type: none"> ● Protocol: DCON ● Module address: 00

	<ul style="list-style-type: none"> ● Communication Baud Rate: 9600 bps ● Checksum: Disabled <p>Note: The DCON command used to configure the address, Baud Rate and checksum of the module is %AANNTTCCFF. Refer to Section 2.1 for details.</p>
Normal	In this mode, the module is operating according to the user's settings.

Note:
 If the I-87211W is not able to receive GPS signals, check the position of the antenna or install the GPS antenna in an open environment.

Default address and communication parameters:

- **Protocol: DCON**
- **Module address: 01 (INIT mode: 00)**
- **Communication Baud Rate: 9600 bps**
- **Checksum: Disabled**

- **DCON Command Table**

General Command Sets			
Command	Response	Description	Section
%AANNTTCCFF	!AA	Sets the Module Configuration	2.1
#**	No Response	Synchronized Sampling	2.2
#AA	!AA(Data)	Reads UTC Time, latitude, longitude, and the number of GPS satellite signals	2.3
#AAN	!AA(Data)	Reads UTC Time, latitude, longitude, date and the number of GPS satellite signals individually	2.4
#AA00(Data)	>	Sets the Digital Output	2.5
#AA0A(Data)	>	Sets the Digital Output	2.6
#AA1c(Data)	>	Sets the Digital Output	2.7
#AAAc(Data)	>	Sets the Digital Output	2.8
\$AA2	!AANNTTCCFF	Reads the Module Configuration	2.9
\$AA4	!S(Data)	Reads the Synchronized Data	2.10
\$AA5	!AAS	Reads the Reset Status	2.11
\$AA6	!AA(Data)	Reads the Digital Output Status	2.12
\$AAC	!AA	Clears the Latched DO Status	2.13
\$AAD	!AA	Save the current date temporarily	2.14
\$AAF	!AA(Data)	Reads the Firmware Version	2.15
\$AAM	!AA(Data)	Reads the Module Name	2.16
\$AALS	!AA(Data)	Reads the Latched DO Status	2.17
@AA	>(Data)	Reads the Digital I/O Status	2.18
@AA(Data)	>	Sets the Digital Output Channels	2.19

~AAO(Name)	!AA	Sets the Module Name	2.20
~AAD	!AAF	Reads the DI/O active status.	2.21
~AADVV	!AA	Sets the DI/O active status.	2.22
~AAI	!AA	Sets the soft INIT	2.23
~AAM	!AASC	Reads with the RS-232 communication mode of the module is NMEA 0183 or DCON	2.24
~AAMN	!AA	Sets the RS-232 communication mode of the module to either NMEA 0183 or DCON	2.25
~AATnn	!AA	Sets the soft INIT timeout value	2.26

Host Watch Dog Command Sets			
Command	Response	Description	Section
~**	No Response	Host OK (The address in this command is zero and can clear the watch dog counter.)	2.27
~AA0	!AASS	Reads the Status	2.28
~AA1	!AA	Resets the Status	2.29
~AA2	!AAVV	Reads the Timeout Settings	2.30
~AA3EVV	!AA	Sets the Timeout Settings	2.31
~AA4V	!AA(Data)	Reads the Power On/Safe Value	2.32
~AA5V	!AA	Sets the Power On/Safe Value	2.33

If you encounter any problems while using you I-87211W module, and are unable to find the help in this manual or on our website, please contact ICP DAS Product Support.
